## Instructions

1. With Moon Unit mounted on ABR800 or Zeus Ringflash and white front diffuser fabric in place, remove ring reflector.
2. Align center hole in mask with center hole in diffuser fabric (except with "Star" mask). Replace ring reflector to secure center of mask and lock reflector with knob on rear of the ringflash unit.
3. Tuck perimeter of mask under the black circle-forming fabric included with 30" Moon Unit. This will secure perimeter of mask.
4. Mask may be rotated to the desired angle using the rotating speed ring, or by rotating the mask itself on the face of the Moon Unit.
5. With the exception of Star, Classic Ring and Ring Of Stars, masks are designed to produce subtle shadow structure on the subject similar to a main light plus fill light. Rotate mask to produce the desired shadow angle. It is usually desirable to keep the shadows falling downward on human models to provide definition to the chin, nose and eye sockets.
5. Blank masks may be cut to produce custom patterns using scissors or knife.
